Trading Mode:

- **Conservative:** conservative trading style
- **Moderate:** standard trading style
- **Extreme:** extreme trading style

Lots-Mode:

- **Fix Lots:** each trade starts with the same lot size
- **Percent of Balance:** the lot size depends on the available capital in the account

Lots (for "Mode Fix Lots"): The fixed lot size. Please note: If you allow partial closing of trades, the fixed lot size must be twice larger than the minimum lot size.

Mode Percentage (0.01-10.0): When set to X percent, the following is determined: If the trade should go into the stop loss, a maximum of X percent of the current free capital may be risked. The EA then calculates the lot size from this. Since the difference between the current price and the StopLoss is always different and the free amount always changes, the lot is never the same size.

Calc. Lots with Margin or Balance: If set to X per cent, the following is defined: Calculation of the lot size based on the capital or the free margin

Max. Spread: Maximum permitted spread for opening a new trade.

EA Magicnumber: freely selectable - only important if more than one EA works on one MT4 account

Trading Days & Hours

On which days and at which time (broker time) may the EA open trades?

Trading days: Allow trades on the following days ("12345") 1 = Monday, 2 = Tuesday, ..., 5 = Friday

Start Trading: Time (broker time), time **from** which trades may be opened

Stop Trading: Time (broker time), time **until** which trades may be opened

Close Trades at "no activ time":

- **close all trades:** All trades are closed when "Stop Trading" is reached, regardless of whether they are in the profit or loss zone.
- **close only trades in profit:** Only the trades in the profit zone are closed. The negative trades continue to run and will continue to be monitored by the EA.

Holiday Date Start & Holiday Date Stop: No trading takes place between these times. No matter what is entered in the "Trading Days & Hours" settings.

Close trades: See point above "Close Trades at on activ time".
