Trade frequency:

- **Conservative:** Conservative trading – fewer trades, but safer trades
- **Extreme:** Higher risk – more trades, but also greater risk for the account. It is best to make weekly withdrawals.

SAR Period: SAR Period indicator – important for extreme trading

Bands Period: Bands Period indicator – important for conservative trading

Step: Trading Step in points

Acceleration: Trading speed – for generating new trades

Trailing Stop: Adjust the StopLoss in points

StopLoss: StopLoss in points

Fix Lots: each trade open with the same lot size

Max. Spread: Maximum permitted spread for opening a new trade.

EA Magicnumber: freely selectable - only important if more than one EA works on one MT4 account

Color: Color used to represent the trade on the chart

Trading Days & Hours

On which days and at which time (broker time) may the EA open trades?

Trading days: Allow trades on the following days ("12345") 1 = Monday, 2 = Tuesday, ..., 5 = Friday

Start Trading: Time (broker time), time **from** which trades may be opened

Stop Trading: Time (broker time), time **until** which trades may be opened

Close Trades at "no activ time":

- **close all trades:** All trades are closed when "Stop Trading" is reached, regardless of whether they are in the profit or loss zone.
- **close only trades in profit:** Only the trades in the profit zone are closed. The negative trades continue to run and will continue to be monitored by the EA.

Holiday Date Start & Holiday Date Stop: No trading takes place between these times. No matter what is entered in the "Trading Days & Hours" settings.

Close trades: See point above "Close Trades at on activ time".
